

Importing Results From PubMed Searches to RefWorks

The results of a search, selections from a search, or selections from multiple searches (by using the PubMed clipboard) can be imported from PubMed to Refworks. Make your selections to be imported, then follow these directions:

1. In the PubMed search results screen, change the display to MEDLINE by first selecting MEDLINE from the "Display" pull-down menu.
2. Next, select Text in the "Send to" pull-down menu. When you click the "Send to" button, a page will open with the citations you've selected. Use the edit menu of your browser to select all, and then copy all the text.
3. Now open your RefWorks account in a new browser window:
www.refworks.com/Refworks/login.asp
4. Login to your RefWorks account with your username and password. (If you are a new user, you may sign up for your individual account from a link on this page).

PubMed Nucleotide Protein Genome Structure

Search PubMed for 1612739

Limits Preview/Index History

Display MEDLINE Show: 20 Sort Send to Text

20: [Portnoy DA, Twisten RK, Kehoe M, Bielecki J](#)

Capacity of listeriolysin O, streptolysin O, and perfringolysin O to mediate growth within mammalian cells.
Infect Immun. 1992 Jul;60(7):2710-7.
PMID: 1612739 [PubMed - indexed for MEDLINE]

5. Once you have successfully opened your account, select "References...Import" to open the RefWorks Import Form.
6. Select the **NLM PubMed** filter in the first pull-down menu (Import Filter/Data Source). Make sure that PubMed is shown in the "Database" box. Then mark "Import Data from the following Text"
7. Use your browser's edit menu to paste the text in this box.
8. At the bottom of the form, click the **Import** button.
9. After a few seconds, the computer will display: **Importing references, please wait...**, then a series of asterisks then appears one by one. After they stop appearing, RefWorks will tell you how many records were imported.
10. Click **View last imported folder** to see your imported citations.
