

## Send to RSS Feed

RSS feeds bring content (like news items) from multiple online sources into one reader or Web page. The feeds are dynamically updated as new items are added from each source. An RSS reader is required and many are available to download free from the Web. Each RSS reader behaves and displays data differently.

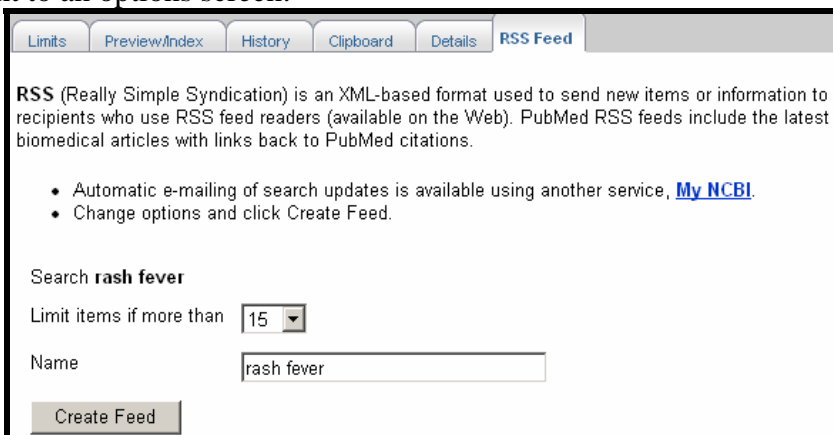

Select **RSS Feed** from the **Send to** menu.

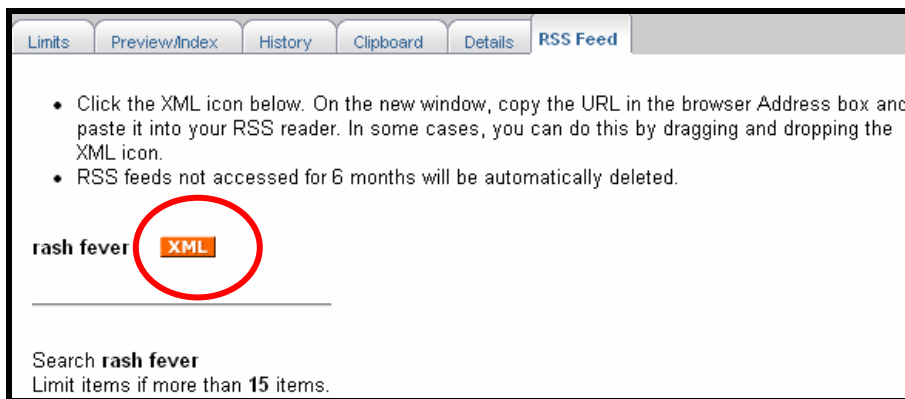

- You are brought to an options screen:

Change these selections if needed.

Click **Create Feed** button.

Click the **XML** icon to display a screen of XML. You don't need the code, just the URL from the address line.

Copy and paste the URL into the "subscribe" form in your RSS reader.
