

|   |          |          |          |   |
|---|----------|----------|----------|---|
|   |          |          |          |   |
| <b>Recommended</b>  |          |          |          |   |
| <b>10. More intuitive language in admin interface</b>   |          | <b>b</b> |          | Not an OSU priority; could be achieved locally.   |
| <b>11. Customizable permissions structure</b>   |          | <b>b</b> |          | A superuser role could easily be created locally that designated different permissions levels.  |
| <b>12. Master subject list customizable from admin interface</b>  |          | <b>b</b> | <b>c</b> | OSU may make the process of assigning a master list of subjects possible from the admin interface, but defining the list is a locally achievable fix. |
| <b>13. Ability to copy/create duplicate subject guides</b>  |          |          | <b>c</b> | This option is available in the course pages section of a La Carte; OSU has identified this as a need and is investigating.                           |
| <b>14. More flexibility for organizing modules - instead of paginated list, a folder or other structure</b>           |          | <b>b</b> |          | Outside of the scope of OSU's vision could be investigated at Berkeley.   |
| <b>15. Guide editing interface that reflects finished guide (rather than a partial one, as is the case currently)</b> | <b>a</b> |          |          | This is currently in development for future release.  |
| <b>16. Ability to specify related course and subject guides in lower left-hand content boxes.</b>                     |          |          | <b>c</b> | Identified as an area of need by OSU, under investigation.  |
| <b>17. A rich text module editor that features source code view/edit options</b>                                      | <b>a</b> |          |          | Already available in recent release.  |
| <b>18. Keyword search for all global modules when adding them to tab</b>  |          | <b>b</b> |          | Outside scope of OSU vision, would need to be investigated locally.   |
| <b>19. General multimedia module type needed that makes it more obvious where/how to embed source code</b>            |          | <b>b</b> | <b>c</b> | Could be developed locally, but also under consideration by OSU.  |
| <b>20. Clearer labeling of global v. local modules.</b>   |          | <b>b</b> |          | Locally manageable change.  |
