

Innopac-to-Millennium order and holdings records field migration

The table on the following pages shows each fixed and variable field in Innopac order and checkin (i.e. holdings) records and how those fields migrated to OskiCat, a process which began with the upgrade to Millennium in Fall 2008 and culminated in the data transfer from the old Innopac server to the OskiCat production server in Spring 2009. The columns in red text show Innopac fields, and the columns in black text show OskiCat fields. Record and field types are arranged as follows:

Page 2: order record fixed fields

Page 3: order record variable fields

Page 4: checkin/holdings record fixed fields

Page 5: checkin/holdings record variable fields

Note that field names, uses, and contents listed here are accurate as of the OskiCat Technical Services go-live day of June 3, 2009; any subsequent changes are reflected in other documentation.
